

Verasonics GPU User Example Script Setup Guide

Confidential

1. INSTALLATION - Ensure that the following products, of mutually compatible versions, are installed on the Verasonics Host Controller Computer:

A. Verasonics system and software (activated)

B. Mathworks Parallel Computing Toolbox (PCT). Please follow Mathworks installation procedure for this toolbox.

C. NVIDIA CUDA-enabled GPU processor

At the MatLab command line, type the PCT statement:

```
>> gpuDeviceCount
```

The above function will display the number of CUDA devices available on the system.

If GPU device count > 0 , the Verasonics GPU example script can function.

If GPU device count = 0 , GPU functionality is not available on the system.

2. RUNNING THE GPU EXAMPLE SCRIPT

A. Execute the script: SetUp_FilterRFGPU.m

B. Run the script on the Verasonics system:

```
>> VSX  
L11-5vFilterRFGPU
```

The system should now be imaging properly.
