

How to find documentation for GPU Toolkit

How to find documentation for *GPU Toolkit*

In an effort to minimize the size of the Verasonics® Software Release package, large documentation files are now provided to users via the Verasonics Community Web Portal. This website is restricted to Verasonics customers and requires a one-time registration. It can be reached by browsing the following URL:

<https://verasonicscommunity.com/>

Once you enter the site, please click the **Vantage™ Resource Documents** tab. Here you will find a list of Application Notes, Manuals, and other helpful documentation about the Vantage system. To narrow the list of displayed documents, please enter a key term in the search box.

The GPU Toolkit documentation includes the following files (search term **GPU**):

1.1 GPU Toolkit Application Note

This is application note for the GPU Toolkit

This document is intended for the use of the GPU Toolkit product. It provides instructions for accelerating computational performance with a GPU and the Vantage Research Ultrasound System. It provides the user with a description of the supported hardware components, a summary of the supported features, and examples.

Also note that other marketing information and specifications are provided on the public [Verasonics](https://www.verasonics.com/) website.

For any other questions on how to use your GPU Toolkit product, please contact support@verasonics.com.
